

# Building Realtime Data Apps with Speedment

TCF IT Professional Conference  
March 17, 2017

Michael P. Redlich  
@mpredli  
[about.me/mpredli/](http://about.me/mpredli/)

# Who's Mike?

- BS in CS from  RUTGERS  
THE STATE UNIVERSITY  
OF NEW JERSEY
- “Petrochemical Research Organization”
- Java Queue News Editor, InfoQ
- Ai-Logix, Inc. (now AudioCodes)
- Amateur Computer Group of New Jersey

# Objectives

- What is Speedment?
- Why Speedment?
- Database Support
- Get Started Building an Application
  - Live Demo (yea!)
- Speedment Resources

# What is Speedment (I)?

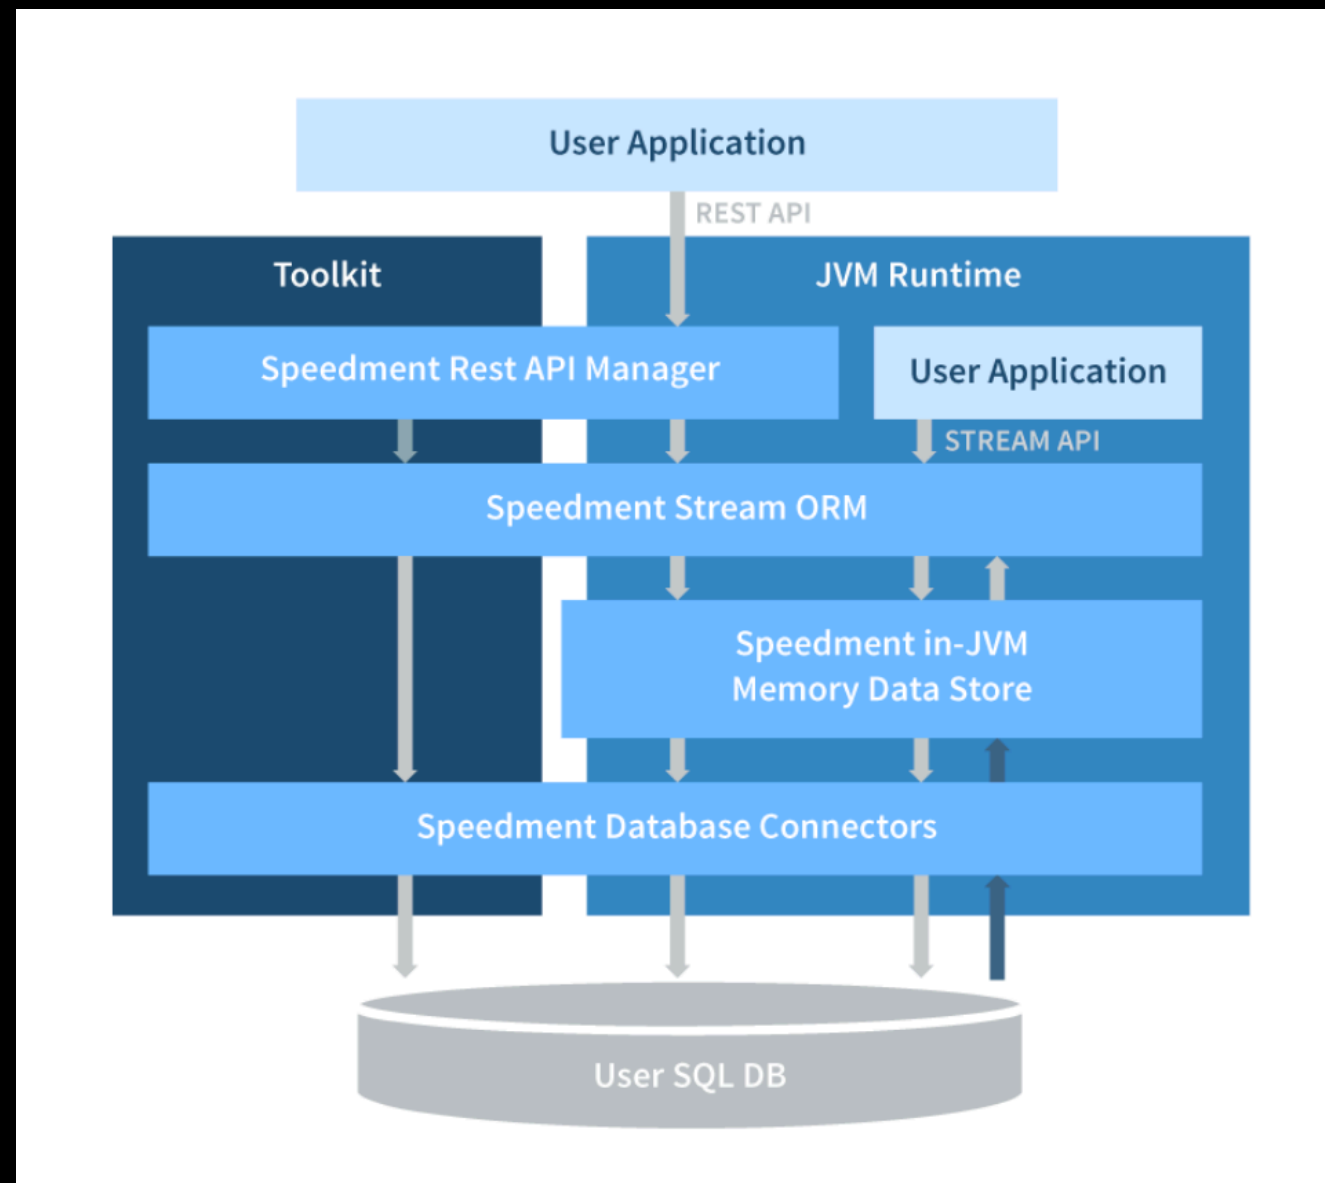

*“Speedment accelerates your development speed and makes database programming so easy and fun. When you use Speedment Open Source for database querying, you do not have to learn a new API or use complex ORMs. Everything is standard Java 8 and works out of the box.”*

Speedment Web Site, <http://www.speedment.org/>

# What is Speedment (2)?

- First introduced in June 2015
- A portmanteau of “speed” and “development”
- Abstracts the process of:
  - database connectivity
  - database operations

# Speedment Integration

# Speedment 3.0.5

- Codename: “Forest”
- Latest features include:
  - declarative Java 8 stream API for databases operations
  - improved user interface

# Why Speedment?

- Full Java 8 support
  - lamdas and streams
- Easy query with Smart Streams
  - no need for coding SQL
- No NULL pointer exceptions

# Speedment Open Source

- Speedment Open Source Database Support:
  - MySQL
  - PostgreSQL
  - MariaDB

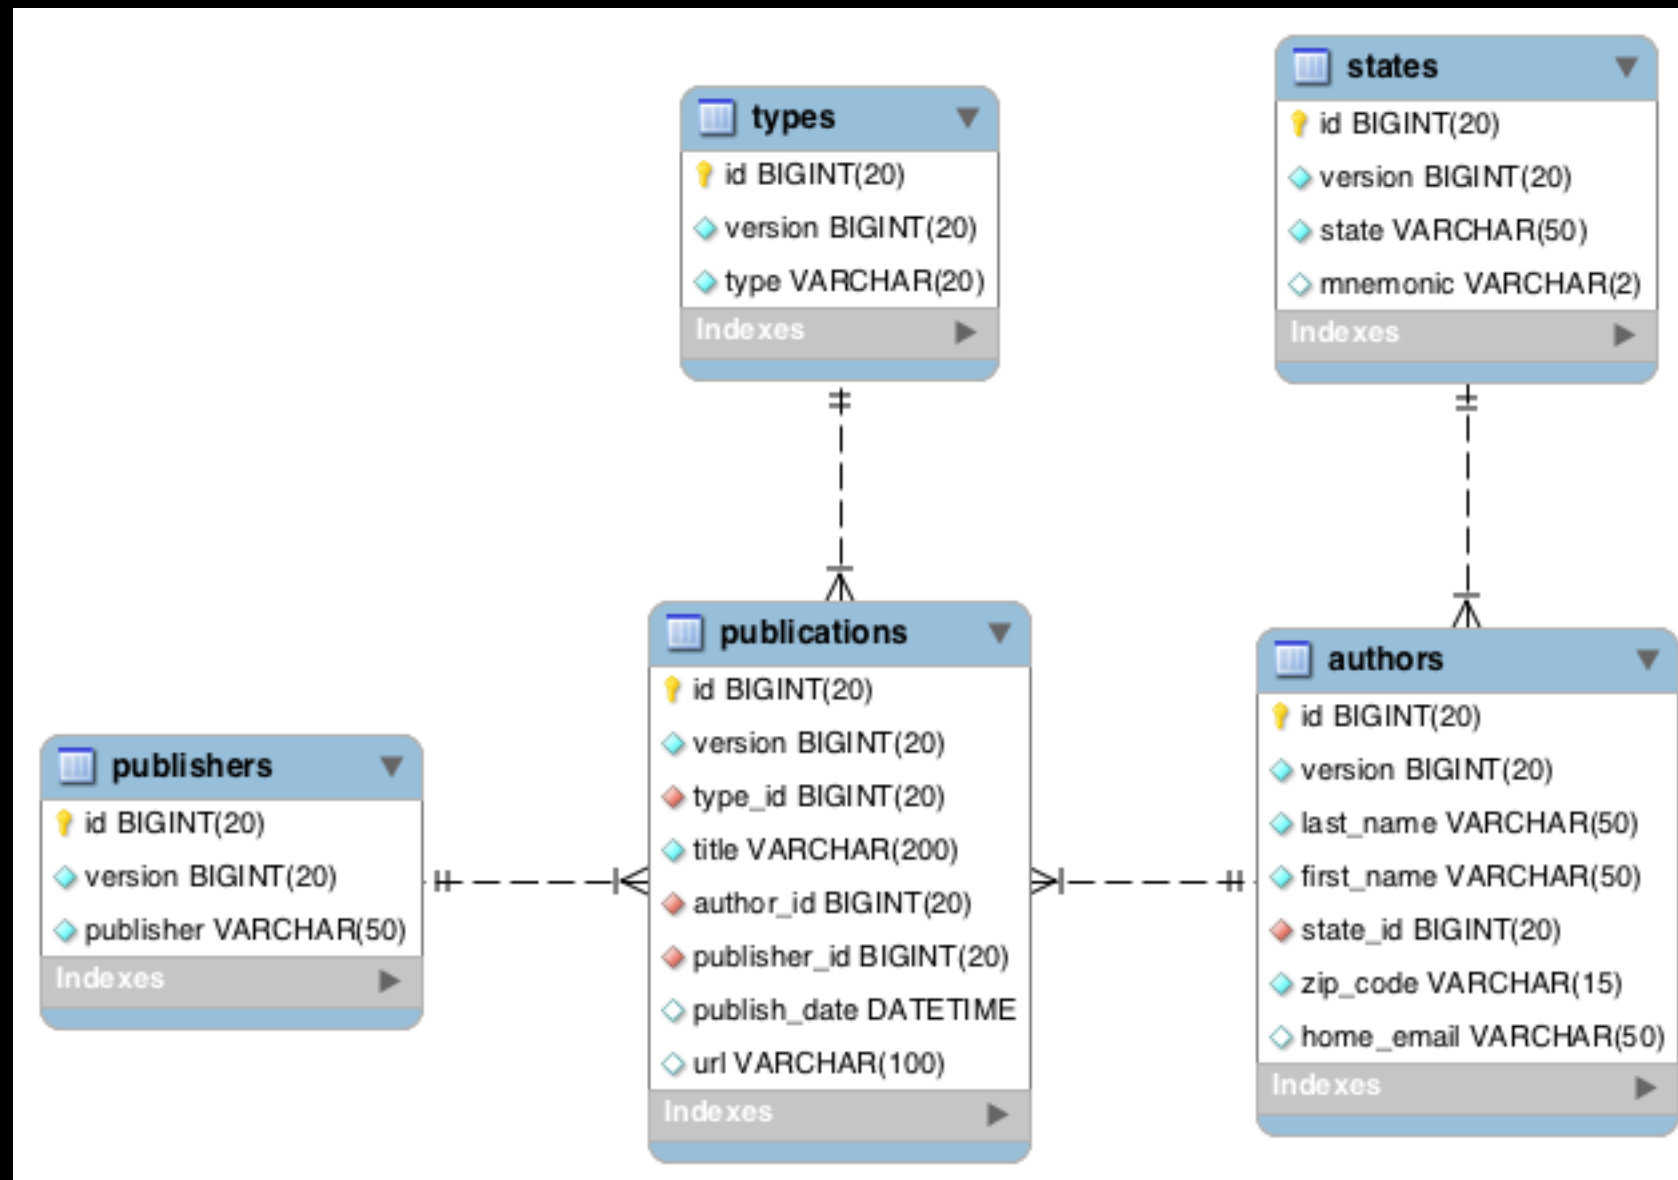

# Speedment Enterprise

- Speedment Enterprise Database Support includes Open Source plus:
  - Oracle
  - DB2
  - AS400
  - SQL Server

# Let's Get Started...

# Example Database

# Getting Started

```
$ mvn archetype:generate
```

← generates a new project

```
-DgroupId=org.redlich.publications
```

← project package

```
-DartifactId=publications
```

← project root

```
-DarchetypeArtifactId=speedment-archetype-mysql
```

```
-DarchetypeGroupId=com.speedment.archetypes
```

← specify desired database

```
-DinteractiveMode=false
```

```
-DarchetypeVersion=3.0.5
```

← the latest version of Speedment

```
&& cd publications && mvn speedment:tool
```

← invoke the Speedment tool

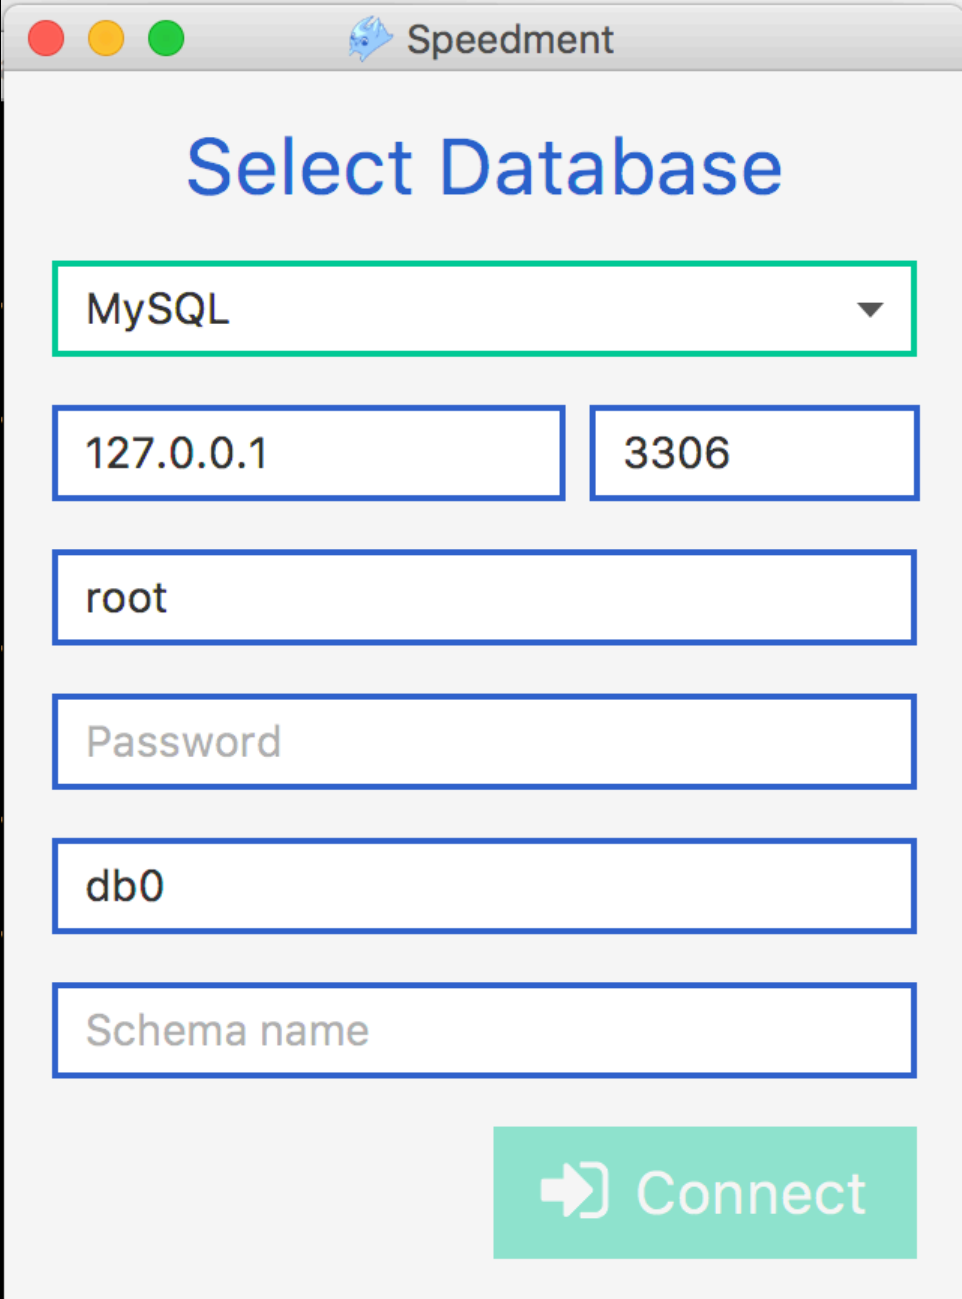

# Speedment Tool (I)

specify desired database →

subpackage (user defined) →

database name →

click...

The screenshot shows a macOS-style window titled "Speedment" with a "Select Database" dialog. The dialog contains several input fields: a dropdown menu for the database type (set to "MySQL"), two text boxes for host and port (127.0.0.1 and 3306), a text box for the username (root), a text box for the password (labeled "Password"), a text box for the subpackage (db0), and a text box for the schema name (labeled "Schema name"). A green "Connect" button with a right-pointing arrow icon is at the bottom right. Annotations with arrows point to the "MySQL" dropdown, the "db0" subpackage field, the "Schema name" field, and the "Connect" button.

MySQL

127.0.0.1 3306

root

Password

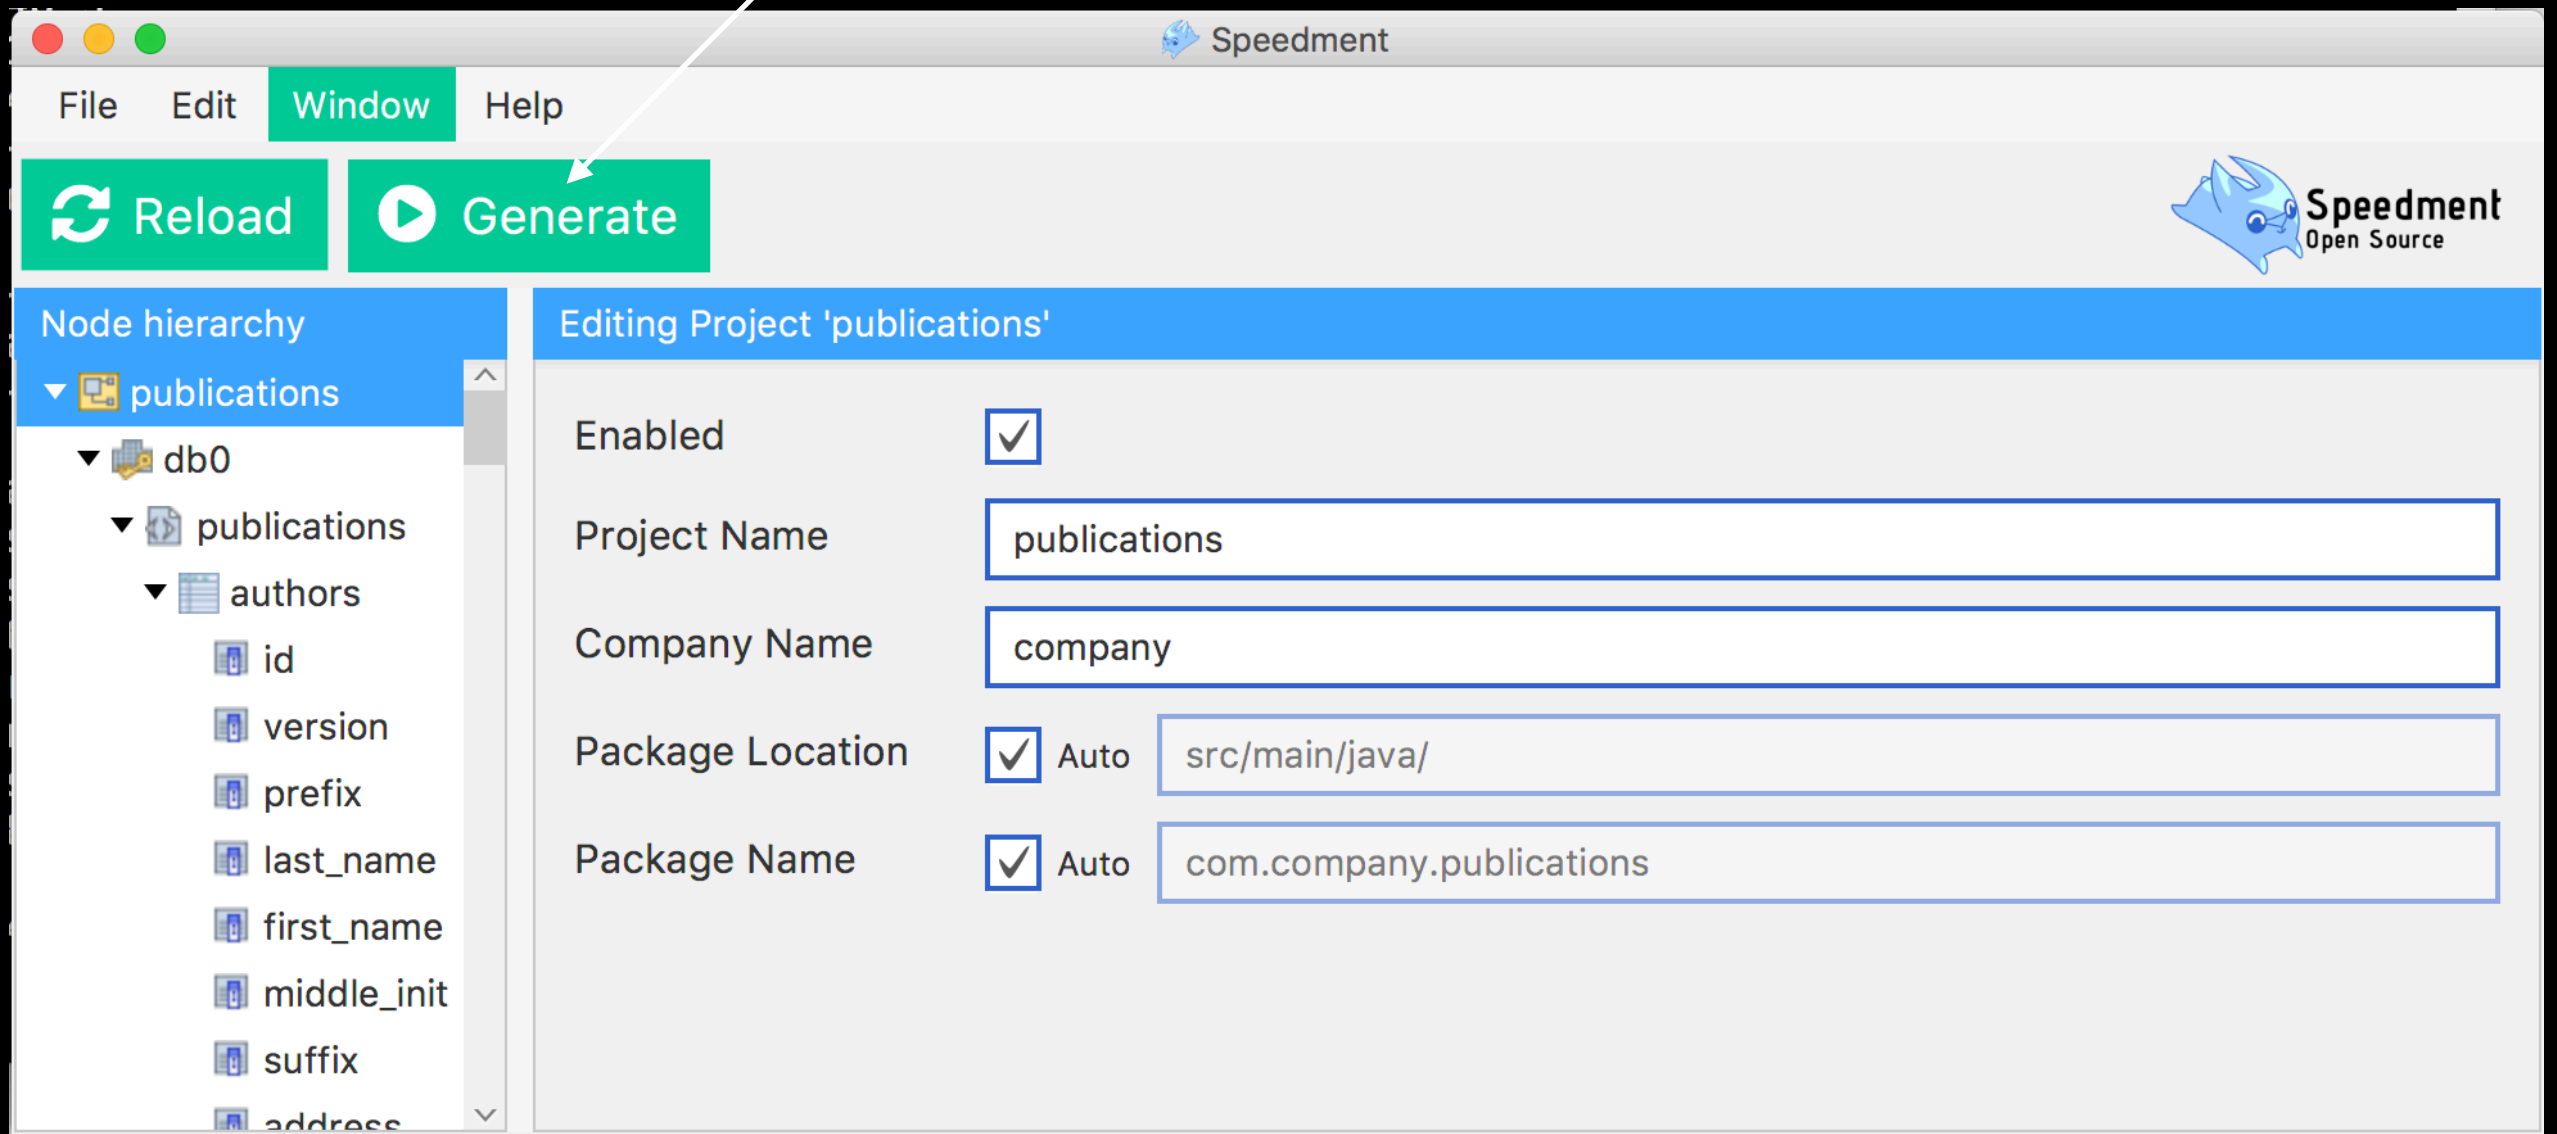

db0

Schema name

Connect

# Speedment Tool (2)

click...

# Let's Build That App...

```
/*  
 * initial setup  
 */
```

```
protected final PublicationsApplication app;  
protected final AuthorsManager authorsManager;  
protected final PublicationsManager  
publicationsManager;
```

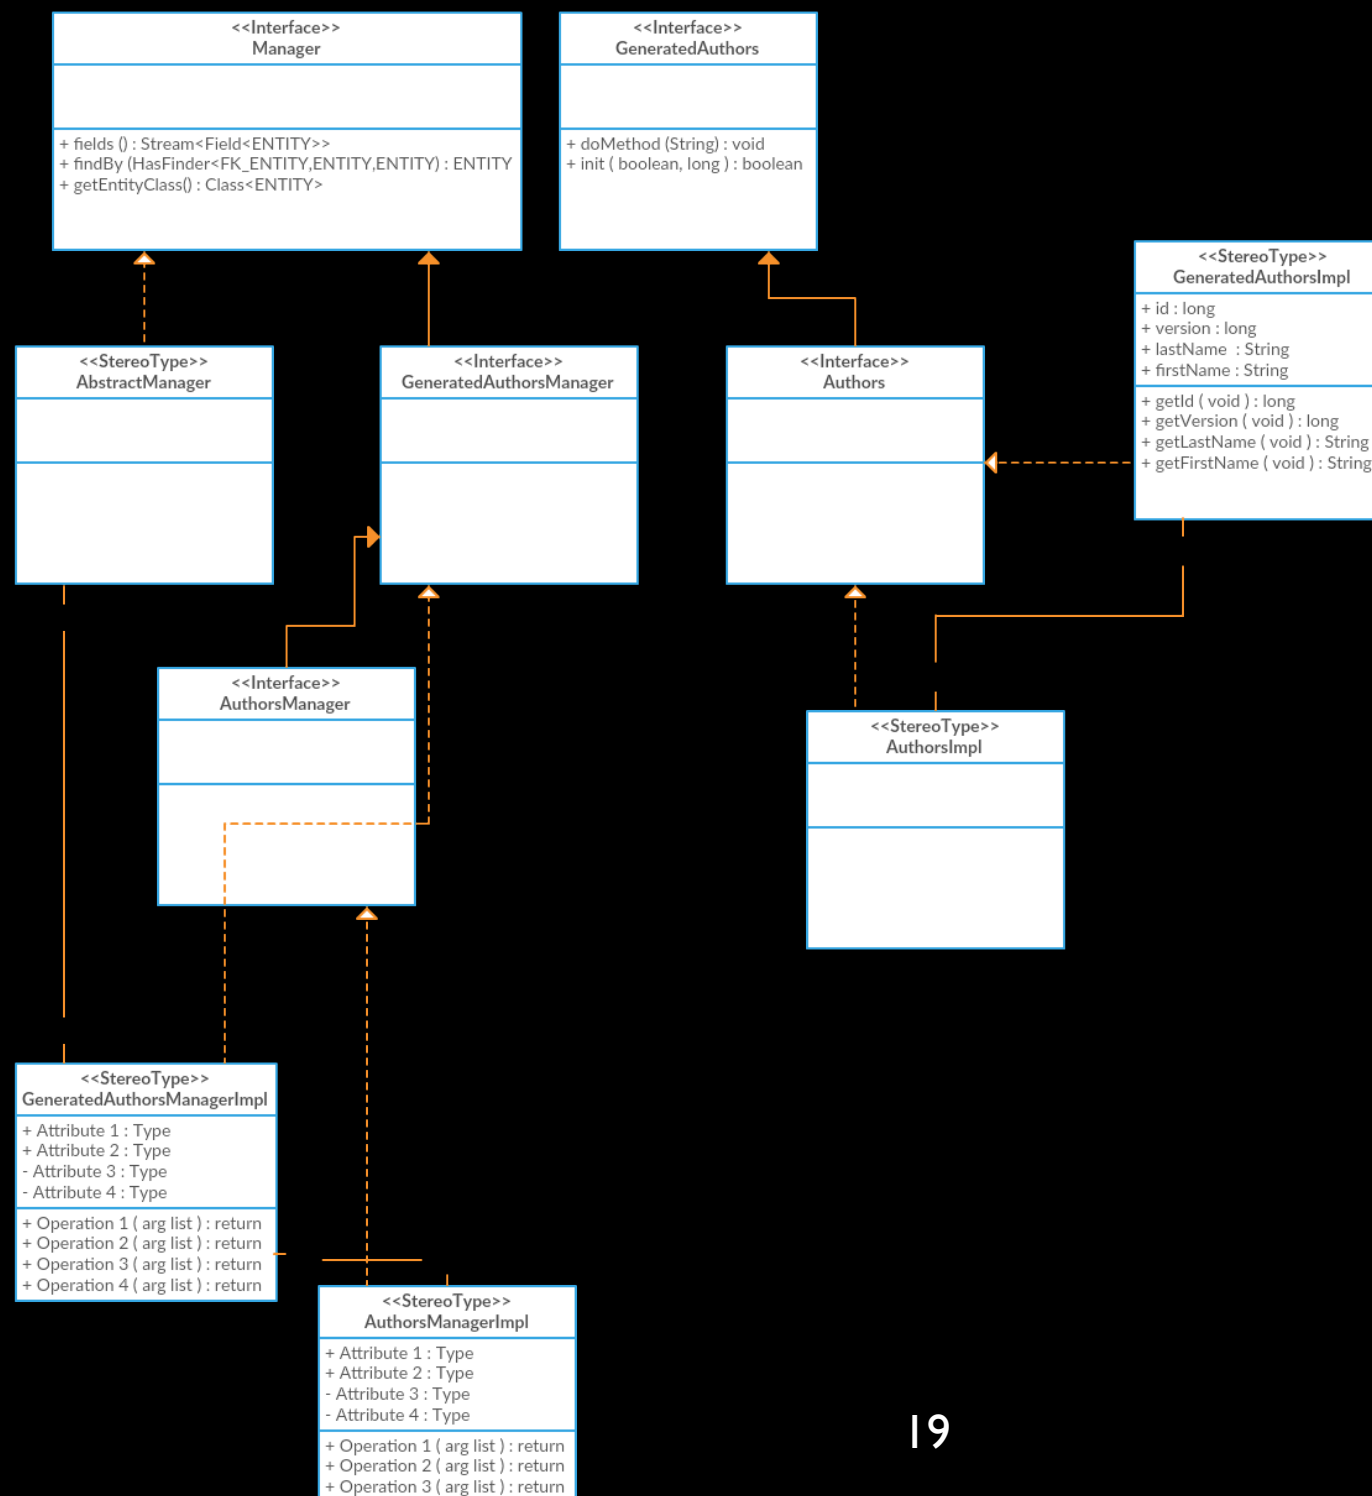

```
app = new PublicationsApplicationBuilder();  
authorsManager =  
    app.getOrThrow(AuthorsManager.class);  
publicationsManager =  
    app.getOrThrow(PublicationsManager.class);
```

main app

manager representing each database table

```
/*  
 * smart streaming  
 */  
publicationsManager.stream()  
    .forEach(System.out::println) ;  
  
publicationsManager.stream()  
    .filter(Publications.TITLE.startsWith("")) ;  
  
long count = publicationsManager.stream()  
    .count()  
  
Optional<Authors> redlich = authorsManager  
    .stream()  
    .filter(Authors.LAST_NAME.equal("Redlich"))  
    .findAny() ;
```
